EDUCATION

Polytechnic University of the Philippines **Manila, PH**
Bachelor of Science in Computer Engineering – Major in Big Data Analytics **2022 – 2026**
Relevant Coursework: Software Design, Database Management, Relational Database Systems, Web and Mobile Systems

TECHNICAL SKILLS

Languages: Python, JavaScript, HTML/CSS, TypeScript, PHP, SQL, C/C++, C#, Dart
Frameworks & Libraries: Next.js, React, Vue.js, Node.js, Flask, FastAPI, Flutter, Tailwind CSS, Matplotlib, Seaborn, Plotly, Recharts
Databases & Tools: PostgreSQL, MySQL, SQLite, Firebase, Supabase, Redis, Vercel, Git/GitHub, Power BI, Google Looker Studio, Microsoft Excel, XAMPP
Tools & AI/ML: Figma, Jira, Agile/Scrum, Pest, Google Gemini, LLM Integration, LangGraph, Prompt Engineering, Lucidchart, Canva

EXPERIENCE

Prime Outsourcing Inc. **Mandaluyong, PH**
Data Science Intern **July 2025 – September 2025**

- Automated workflows using Google Apps Script and Google Sheets, reducing manual processing time by 40% (10 hours weekly).
- Built interactive KPI dashboards in Google Looker Studio to visualize sales trends for leadership.
- Developed an automated Google Apps Script system for attendance and workforce tracking.
- Deployed a 4-node DECO Wi-Fi Mesh System to optimize office network infrastructure.
- Redeveloped website UI/UX designs using Figma to enhance user experience and align with front-end requirements.

Pixel8 Web Solutions Inc. **Albay, PH**
Data Modeler Intern **July 2024 – September 2024**

- Normalized MySQL relational databases to improve data integrity, eliminate redundancy, and boost query performance.
- Designed ERDs using Lucidchart to visualize data relationships and streamline development documentation.
- Standardized data modeling practices to align backend constraints with UI/UX front-end needs.

CERTIFICATIONS & TRAINING

CCNA: Introduction to Networks – Cisco Networking Academy
Big Data Fundamentals with PySpark – DataCamp
Building Dashboards with Dash and Plotly – DataCamp
Intermediate SQL – DataCamp
Introduction to Power BI – DataCamp
Introduction to Excel – Data Camp
Data Analysis in Excel – DataCamp

TECHNICAL PROJECTS

BioNana: An IoT-Based Fertilizer Processing System – CPE Capstone Project **June 2025 – May 2026**

- Developed a mobile-integrated IoT ecosystem to automate organic fertilizer production from banana pseudostems.
- Engineered a hybrid database architecture combining Firebase for real-time cloud synchronization and SQLite for uninterrupted offline sensor telemetry.
- Programmed C++ logic to bridge ESP32 hardware sensors directly to the cloud database, ensuring real-time hardware monitoring.

AXIS (Automated eXtraction & Integration System) — AI-Powered SaaS Platform **May 2026 – June 2026**

- Architected a full-stack platform that extracts and pre-fills structured data from Philippine government forms, reducing form completion time from hours to minutes. Decoupled AI extraction logic from API routes into a dedicated service layer, enabling a clean, maintainable architecture for high-accuracy form processing.

InkSight – Full Stack Development Self Project **July 2026**

- Built a serverless educational web application to automate the grading of handwritten and typed student essays.
- Designed a fail-safe, multi-model AI pipeline that delivers instant academic metrics and personalized feedback to educators.
- Enforced strict database security rules and data stripping protocols to ensure all student information remains completely private.

No Limits Dashboard – Google Looker Studio Project **July 2026**

- Built an interactive game analytics platform in Google Looker Studio to track user engagement and betting behavior within a gaming portfolio.
- Engineered an automated PDF import function that extracts and processes raw document data, dynamically feeding it into the dashboard for real-time visualization.
- Visualized complex datasets for exploratory data analysis, identifying high-performing games (e.g., Mental II, San Quentin 2) alongside peak activity hours and spin strategy effectiveness.
